

Global Alliance for Genomics and Health (GA4GH): Proposed Policy Template

Standardized Preamble:

The GA4GH Framework is founded on Principles and Core Elements, and further elaborated by Policies on particular issues. These Policies can become the tools and benchmarks that approved entities, recognized by different jurisdictions, turn or refer to for guidance. These Policies can help entities make improvements or adopt specific best practices for responsible data sharing and governance processes. Recognizing diversity of legal and ethical approaches and being responsive to emerging issues, both this Framework and its Policies are intended to provide leadership on these issues.

Context/Background: Describe Issues/Domain

**Specific Policy Principles particular
to an issue**

e.g.:
Privacy / Security
Consent
Ethics and Governance
